

THE MONSTER AND INTELLIGENT CHARGER

POWER

POWER

POWER

**If The BIG One is not enough for you then the answer is The MONSTER!
This is the ultimate solution to your power requirements or problems!**

It is a MONSTER unit at a mini price!

This is our auxiliary power supply to be used with **The BIG One** to almost treble The BIG One's capacity to a massive 58 Ah. It is a 24 volt sealed lead acid battery built into an extremely rugged, easy to carry, protective case (the Peli™ 1300)

This beauty is guaranteed to provide even the heaviest, greediest user with all-day operation; but if you are still worried, why not buy twin-**MONSTERS**? Or even multiple-**MONSTERS**? - you can use one, charge one (or two) - which really would give you power into infinity

The MONSTER incorporates a super-efficient blue LED to monitor battery condition, fuse OK, connecting cable OK, etc

A rugged curly connecting lead with right-angled XLR3 plugs is supplied with your unit

The MONSTER can be charged either overnight from **The BIG One**, or from our independent intelligent fast-charger

The Charger (pictured right) is an intelligent three stage charger capable of charging a flat **MONSTER** battery in about five hours. It can be switched to work on either 230 or 115 volt supplies. Switching between phases is fully automatic and the **Charger** can be left connected to the **MONSTER's** battery indefinitely without damage. The red LED indicates the constant current/boost charge. When the LED shows green the battery is charged. **The MONSTER** battery can be removed from the charger when convenient
