

Our Video Sender system is designed to transmit high quality pictures and sound from a camera to a monitor using a 2.4 GHz microwave link.

Our standard Five Channel units have proved to be the most popular to fit everyone's requirements for most jobs. However, we can also offer a Single Channel version (made to order).

**But this is our \*NEW\* Miniature Transmitter, powered by a single AA Battery!**

## AA-BATTERY POWERED MINIATURE VIDEO SENDER TRANSMITTER

This **Miniature Video Sender Transmitter** is powered by a single AA battery and solves the problem of using it with cameras that don't have a 12 volt power outlet, such as the Sony Z1, etc

This unit has the same performance as our standard 5 channel unit but without transmitting sound. It is almost half the size and weight of our standard 5 channel Transmitter (shown on next page)

The **new-type** omni directional aerial is rigid and much more robust than the Mk 1 type and equally efficient at radiating in all directions. It attaches to the TX by a screw on SMA connector. This new aerial is now standard in view of its proved rugged sturdiness

### Features:

- ✓ Easily switchable to 5 different channels (selector on opposite side of case to green LED and power switch)
- ✓ Standard PAL or NTSC composite video input on a BNC socket
- ✓ On/Off toggle switch with green LED
- ✓ Up to 300 metres range outdoors (line of sight), or up to 30 metres indoors

**Price: £345**

Height: 35 mm  
Length: 100 mm  
Width: 50 mm  
Weight: 155 grms
