

THE PACKAGE

PRICE REDUCTION!
(was £1,485)

This truly splendid bit of kit has proved itself - for more than five years now - to be the most desired thing; it is drooled over, yearned for and lusted after by Directors, Cameramen and Soundmen alike. No fuss - everything you need all ready assembled for you - you don't have to do anything except take it away, switch it on and start filming! What could be simpler? It surely is the ultimate... The Package is the one...

The Monitor and Receiver fit beautifully into the specially made carry bag, and there is also room in the bag for an NP1 battery (we include an NP1 clip adapter but not the battery) to power them both

The bag, made by KATA, is an excellent, sturdy and padded carry bag which hangs across your body and incorporates a hood to shield the monitor screen from reflections and sun

The Box Aerial is very lightweight and simply velcro's to the front of the bag

The Remote Switch is unique to Black Box Video - you won't see one elsewhere! This is a single switch to activate or turn-off all the parts (both Monitor and Receiver) located at the bottom left corner of the carry bag and it saves you having to unzip the bag and grope for switches. The Remote Switch even contains an indicator which constantly shows your battery power level

It has now long been our opinion that the DataVideo TLM-700 Monitor is the best and easiest to use (and we tested plenty), with an amazingly clear and bright screen (even in the strongest sunlight) and a wide viewing angle

- ✓ 7" TFT LCD active matrix
- ✓ 1440 x 234 pixels (336,960 pixels)
- ✓ NTSC/PAL auto recognition
- ✓ Video Input 2 x CV input 1.0Vp-p (75 ohms terminated)
- ✓ Monitor weight 734 grms

Like the TX and RX, the Monitor is both PAL and NTSC

The Package includes:

- ✓ the superb DataVideo 16 x 9, 7" Wide Screen TFT Colour Monitor (TLM-700)
- ✓ Black Box Video's standard **Five Channel Video Sender Transmitter and Mk 2 Receiver**
- ✓ the 8dB Gain Box Aerial, with SMA - SMA lead to connect it to the Receiver
- ✓ Black Box Video's **Remote On-Off Switch** (comprising a BP90 input socket to 2 x HRS4M leads via illuminated on-off switch)
- ✓ KATA Carry Bag with shoulder strap (LCM-1)
- ✓ NP1 Clip Adapter (the battery itself is not supplied as standard)
- ✓ all relevant custom-made cables, ie: HRS4M - HRS4M lead (to power the TX) or a HRS4M - BP90, or a HRS4M - Anton Bauer Power Tap, the choice is yours; a BNC - BNC lead for video input to the Transmitter
- ✓ R/A SMA Adapter, R/A BNC Adapter and a R/A Phono Adapter

Powering The Package:

You can use any nominal 12v battery to power The Package so long as it will fit in the KATA Bag and has a suitable power outlet to plug into the 2.1mm socket on the Remote Switch (we can supply a variety of adapters for this purpose if necessary). We have assumed the NP1 system as standard, but if you prefer you can power The Package with a V-Lock Battery - we'll provide a V-Lock plate instead of the NP1 Clip Adapter. The V-Lock powering version adds £50 to the price

Please note - the price is based on the standard 5 Channel TX and RX. Upgrades are available, as with most of our products, should you decide to go for the High Power 5 Channel TX - or even the High Power 16 Channel TX and 16 Channel RX! If you decide on such an upgrade, the price will adjust appropriately
