

# THE STAMP

## - Miniature Video Sender Transmitter

### 2.4 GHz Microwave

The Stamp is designed to transmit microwave signals to any of our Receivers and display high quality pictures on any monitor of your choice. Because the new version is now crystal controlled it no longer suffers from any variation in frequency.

**THE STAMP** is surely the smallest and lightest transmitter ever!

With **THE STAMP** you get simple, inexpensive, lightweight quality.

Our Video Sender Miniature Transmitter is literally only the size of a First Class postage stamp, hence its name.

**The Stamp** transmits high quality video, just like our bigger units, but is INCREDIBLY small and light - *only 8 grams!*

It comes with a BNC plug to attach to the Video-out socket on your camera, and a HRS4M plug to power the unit, so there is no extra expense required for cables. The cables are also ultra-lightweight and super-flexible.

This is a single channel unit which works brilliantly with our standard 5 channel Receiver. Sadly, to achieve such a minute unit, **The Stamp** cannot give you sound, but the benefits of something so tiny and lightweight far outweigh that!

Price: **£165**

Height: 15 mm  
Length: 32 mm  
Width: 25 mm  
Weight: 8 grms
